School & Organization Purchasing Guide

Veluneli Read Along | Bagsy: Five Stories in One

Purchasing guide - October 11, 2026. Coordinate app purchasing and installation with your IT or procurement team. Confirm regional availability and the final price in Apple's purchasing service before placing an order.

What your purchase includes

Five Bagsy stories, 40 illustrated reading pages and 109 tappable picture-word buttons. Reading text, controls and narration are available in English, Spanish and French. All five stories are included; there are no subscriptions or in-app purchases.

Devices: Compatible iPhone and iPad devices running iOS 17 / iPadOS 17 or later. Narration voices and optional on-device listening depend on device support.

Count licenses by deployment, not by classroom size

Shared devices: Purchase a separate license for each device used by multiple readers. For example, 30 children taking turns on five classroom iPads require five device licenses, not 30 student licenses. One purchase is not a site-wide license. [1]

Recommended route: Use device-based assignment for shared iPads. Your IT team can distribute paid apps through Apple School Manager or Apple Business and a device management service (often called MDM). Device-based app assignment does not require a personal Apple Account on each device. [2, 3]

U.S. planning budget at \$19.99 per license

Shared devices / licenses	Estimated app cost
1	\$19.99
5	\$99.95
10	\$199.90
20	\$399.80
50	\$999.50

Estimates exclude tax, hardware and device management costs. They assume the full U.S. launch price and no volume discount. Use the price displayed by Apple at checkout; regional pricing can differ. [4]

PURCHASE • ASSIGN • SUPPORT

A simple path for your team

1. Choose an organizational purchasing route

Schools and districts: Apple School Manager. Businesses and other eligible organizations: Apple Business (formerly Apple Business Manager). Ask your IT or procurement lead to confirm enrollment, purchasing privileges, payment method and device management. [2, 3, 5]

2. Find the correct app

Search Apps and Books for **Veluneli Read Along**. Confirm the developer is **Veluneli Books LLC**; Apple app ID: **6820749068**. Confirm availability in your organization's region before purchasing. [4]

3. Purchase the required license quantity

Select the purchasing location or organizational unit, enter your quantity and review the final price before buying. Keep Apple's purchase record for your procurement files. App license purchases are processed through Apple; contact Veluneli separately about books or reading programs. [5]

4. Assign licenses and install

Your IT team connects purchasing to device management, assigns one license to each shared device, and installs the app. Managed app licenses can be revoked and reassigned when devices or assignments change. [2, 3]

5. Pilot before wider deployment

Start with one or two licensed devices. Check the story opening, phrase narration, Bagsy pronunciation, word highlighting, picture-word buttons, language choice and audio controls on the devices you intend to use. Then expand to the remaining licensed devices.

Settings and privacy for shared use

The app requires no account or child profile. Optional reading activity totals stay on the device and do not measure reading ability. Adults preview feedback before choosing to share it. Optional listening requires supported on-device speech recognition and microphone/speech permission; recordings and transcripts are not saved. Review the policy and your organization's permission rules before enabling listening or sharing feedback.
